Art Unit: 3611

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-4, 8-11, 15-17, and 20-22 are rejected under 35 U.S.C. 102(e) as being anticipated by Scotese et al. (USPN 2002/0093153).

Scotese shows a vehicle with first and second vehicle sections 12, 16, that are articulated about a longitudinal axis 26. A positioning actuator 50 rotates the first and second sections relative to each other about the longitudinal axis to a predetermined position.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Scotese in view of Plate (USPN 5,639,119).

Scotese shows only one actuator.

Plate shows a stabilizing device for adjusting the position of vehicle sections about a longitudinal axis 70 of the vehicle, including two actuators 86, 86', mounted to

Art Unit: 3611

one vehicle section that act against two bearing surfaces 64, 66, on the other vehicle section.

It would have been obvious to one of ordinary skill in the art to provide two actuators, in place of a single actuator, as taught by Plate, in order to increase the force applied.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Mueller shows a lockable suspension with actuators 31, 33, that return a second vehicle part 11 to a predetermined position.

Unruh and Ishikawa show vehicles with leveling and lockup actuators.

Thrope, McCain, and Enos show vehicles divided between front and rear vehicle sections and including a longitudinal pivot.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anne Marie M. Boehler whose telephone number is 571-272-6641. The examiner can normally be reached on 7:30-5:00, Monday-Thursday, and alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lesley Morris can be reached on 571-272-6612. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
